HANDLING – MANEJO

The contractor is responsible for properly receiving, unloading and storing the trusses on site. The contractor is also responsible for identifying the location of the trusses on the construction documents and ensuring that crane operators and other personnel are aware of the truss locations.

Bending and twisting trusses can cause damage. Ensure that the crane operator and all personnel are aware of the truss locations.

Do not store the trusses in front of the truss bundle unless they are packaged and properly secured.

Do not store the trusses in front of the truss bundle unless they are packaged and properly secured.

If trusses are to be handled during the erection process, ensure that they are properly packaged and secured before being moved or transported.

Do not store the trusses in front of the truss bundle unless they are packaged and properly secured.
